RYAN WAWERU

Senior Frontend Engineer | React, TypeScript, Next.js | Real-time web applications

ryannjoroge45@gmail.com · github.com/ryann254 · linkedin.com/in/ryan-w-3a81a9198 · Nairobi, Kenya

EXPERIENCE

Senior Software Engineer

Streamlyne

07/2025 - Present · U.S. | remote

- Work on the platform U.S. universities run their research administration on, including a real-time messaging product with voice support that helps researchers prepare documents, answer university policy questions, and plan budgets. Submissions went up 29%.
- Build and maintain product across the frontend and the backend, and take part in roadmap and technical decisions that weigh customer needs against delivery speed and what we can maintain later.
- Helped modernize a long-running Java application by rebuilding selected workflows in React and Node, cutting load times 44%, and put the project in Docker so other developers could run it locally.
- Work with product and other engineers to break down vague problems and judge whether something is a quick fix, an architectural change, or a roadmap item.

Senior Mobile Engineer

Surveva

04/2024 - 09/2025 · Kuwait | remote

- Built and maintained features for the Surveva survey app in Flutter and Node.js.
- Wrote a lazy-loading algorithm that cut survey load times 25%, which mattered most to people working through longer surveys.
- Worked across the UI, application logic, API integrations, debugging, and release prep, and helped decide the frontend architecture with a remote team.
- Built a CI/CD pipeline so the team could test and ship more reliably from different time zones.

Software Engineer

Riyadh Real Estate

12/2023 - 04/2024 · France | remote

- Built a property management platform and helped onboard more than 500 property owners.
- Worked across the frontend and the backend on a remote contract: API integration, debugging, and shipping features.

SUMMARY

I'm a frontend engineer with six years of experience, most of it in React and TypeScript. The work I enjoy most is the kind where data keeps arriving while you are looking at it and the page still has to feel quick.

At Streamlyne I built a real-time messaging product with voice support that helps university researchers draft documents and ask questions about policy. Research submissions went up 29%. I also rebuilt parts of a long-running Java application in React and Node, which cut load times by 44%.

Before that I worked on mobile apps and on the backend. Some projects include a survey app in Flutter where lazy loading cut load times 25%, an author dashboard publishing to more than 5,000 students, and a property platform where analytics work improved ad spending by 20%.

I'm in Nairobi and I work remotely with teams in the US, Europe, and the Middle East.

ACHIEVEMENTS

Research submissions up 29%
Built a real-time messaging product with voice support that helps researchers prepare documents, ask questions about university policy, and plan budgets.

Load times down 44%
Rebuilt selected workflows of a long-running Java application in React and Node, and put the project in Docker so other developers could run it locally.

45% of an application moved to React
Migrated it incrementally, which made the interface faster and steadier as it went.

Subscriptions up 25%
Led a subscription dashboard for premium content and newsletters on an NFL-focused sports product.

Ad spending improved 20%
Added analytics to a property platform so managers could see where their traffic came from.

SKILLS

Frontend

React | TypeScript | Next.js | JavaScript | Redux | HTML

Frontend Developer

newLine

09/2023 - 11/2023 · Contract | remote

- Led the author dashboard for publishing educational content to more than 5,000 students, building the video and book management experience in Next.js and Redux.
- Connected the dashboard to Discord's API so students could comment from Discord without leaving where they already were.
- Built reporting views on MongoDB so authors could watch how their content performed, and planned milestones with senior management.

Frontend Engineer

Tintash

02/2023 - 08/2023 · Contract | remote

- Led a subscription dashboard for premium content and newsletters, which raised subscriptions 25%.
- Worked with a cross-functional team on the frontend of an NFL-focused sports product and helped choose its architecture.
- Added end-to-end tests and release checks that caught problems before production.

Full Stack Engineer

MajiSoft Innovations

01/2022 - 02/2023 · Nairobi, Kenya | hybrid

- Designed and built a property management platform for owners and agents.
- Added analytics so property managers could see where their traffic came from, which improved ad spending by up to 20%.
- Built the backend workflows for uploading and tracking properties and agents.

Mobile Engineer

Park254

01/2021 - 12/2021 · Nairobi, Kenya | remote

- Designed and built a parking app that helped drivers find parking near them.
- Integrated Google Maps and routing to guide drivers to the lot they picked.
- Added in-app payments and the backend jobs that worked out parking time.

Frontend Developer Intern

SoftsearchLab

01/2020 - 06/2020 · Nairobi, Kenya | on-site

- Built frontend screens and authentication for a logistics startup tracking truckloads and revenue.
- Added dynamic search and worked on performance and page loading.
