RYAN WAWERU

Senior Frontend Engineer | React, TypeScript, Next.js | Real-time web applications

ryannjoroge45@gmail.com · github.com/ryann254 · linkedin.com/in/ryan-w-3a81a9198 · Nairobi, Kenya

EXPERIENCE

Senior Software Engineer

Streamlyne

07/2025 - Present · U.S. | remote

- Work on the platform U.S. universities run their research administration on, including a real-time messaging product with voice support that helps researchers prepare documents, get answers on university policy, and plan budgets. Submissions went up 29%.
- Build and maintain features across the frontend and the backend, and take part in roadmap and technical decisions that weigh customer needs against delivery speed and what we can maintain later.
- Took a Java application that had been running for years and rebuilt nearly half of it in React and Node, one workflow at a time, which cut load times by 44%. Also put it in Docker so the rest of the team could run it locally.
- Work with product and other engineers to break down vague problems and judge whether something is a quick fix, an architectural change, or a roadmap item.

Senior Mobile Engineer

Surveva

04/2024 - 09/2025 · Kuwait | remote

- Built and maintained features for the survey app in Flutter and Node.js.
- Wrote a lazy-loading algorithm that cut survey load times by 25%, which mattered most to people working through longer surveys.
- Worked on the UI, the application logic, and the API integrations, and helped a remote team settle on the frontend architecture.
- Built a CI/CD pipeline so the team could test and ship more reliably from different time zones.

Software Engineer

Riyadh Real Estate

12/2023 - 04/2024 · France | remote

- Brought more than 500 property owners onto a property management platform.
- Built both ends of it, the frontend screens and the APIs behind them.

SUMMARY

I'm a frontend engineer with six years of experience, most of it in React and TypeScript. The work I enjoy most is the kind where data keeps arriving while you are looking at it and the page still has to feel quick.

At Streamlyne I built a real-time messaging product with voice support that helps university researchers draft documents and ask questions about policy. Research submissions went up 29%. I also rebuilt nearly half of an old Java application in React and Node, which cut load times by 44%.

Before that I worked on mobile apps and on the backend. Some projects include a survey app in Flutter where lazy loading cut load times by 25%, an author dashboard publishing to more than 5,000 students, and a property platform where analytics reduced ad spending by 20%.

I'm in Nairobi and I work remotely with teams in the U.S., Europe, and the Middle East.

ACHIEVEMENTS

Research submissions up 29%
Built a real-time messaging product with voice support that helps researchers prepare documents, ask questions about university policy, and plan budgets.

Load times down 44%
Rebuilt 45% of an old Java application in React and Node, one workflow at a time, and put the project in Docker so other developers could run it locally.

Subscriptions up 25%
Led a subscription dashboard for premium content and newsletters on an NFL-focused sports product.

Ad spending down 20%
Added analytics to a property platform so managers could see where their traffic came from.

SKILLS

Frontend

React · TypeScript · Next.js · JavaScript · Redux · HTML · CSS · Responsive UI

Mobile

Flutter

Frontend Developer

newLine

09/2023 - 11/2023 · Contract | remote

- Led the development of the author dashboard for publishing educational content to more than 5,000 students, building the video and book management screens in Next.js and Redux.
- Connected the dashboard to Discord's API so students could comment from inside Discord instead of signing in to the dashboard.
- Built reporting views on MongoDB so authors could watch how their content performed.
- Planned the milestones with senior management.

Frontend Engineer

Tintash

02/2023 - 08/2023 · Contract | remote

- Led the development of a subscription dashboard for premium content and newsletters, which raised subscriptions by 25%.
- Worked on the frontend of an NFL-focused sports product and helped choose its architecture.
- Added end-to-end tests and release checks that caught problems before production.

Full Stack Engineer

MajiSoft Innovations

01/2022 - 02/2023 · Nairobi, Kenya | hybrid

- Designed and built a property management platform for owners and agents.
- Added analytics so property managers could see where their traffic came from, which reduced ad spending by 20%.
- Built the backend workflows for uploading and tracking properties and agents.

Mobile Engineer

Park254

01/2021 - 12/2021 · Nairobi, Kenya | remote

- Designed and built a parking app that helped drivers find parking near them.
- Integrated Google Maps and routing to guide drivers to the lot they picked.
- Added in-app payments and the backend jobs that worked out how long a car had been parked and what the driver owed.

Frontend Developer Intern

SoftsearchLab

01/2020 - 06/2020 · Nairobi, Kenya | on-site

- Built frontend screens and authentication for a logistics startup tracking truckloads and revenue.
- Added dynamic search and cut the time the pages took to load.

Backend and APIs

Node.js | REST APIs | GraphQL | MongoDB | SQL

Testing and tooling

Jest | Cypress | Git | Docker | CI/CD | AWS | Figma

Practices

Real-time systems | LLM applications | Performance optimization | Architecture design | Code reviews | Team leadership

EDUCATION

Diploma in Software Application Packages

Graffins College

CERTIFICATIONS

Microsoft Azure Fundamentals

Huawei Certified ICT Associate, OWS Developer
